

Data Movement and Transformation using Azure Data Factory

DataGrillen 2022

Who I am

Alpa Buddhahatti, Cluster Reply, UK

**Microsoft Certified:
Azure Data Engineer
Associate**

Microsoft

<https://twitter.com/AlpaB7>

**Microsoft Certified
Trainer 2021-2022**

Microsoft

Agenda

1. Azure Data Factory (ADF) Overview

1.1 What is Azure Data Factory?

1.2 What are Key Components of Azure Data Factory?

1.3 What can you do in ADF?

2. DEMO –

2.1 ADF Quick Tour !!!

2.2 Case Study - Data Movement and Transformation using Azure Data Factory

What is Azure Data Factory?

A cloud-based data integration service that orchestrates and automates the movement and transformation of data

What is Azure Data Factory?

- ✓ Azure Platform as a Service (PaaS)
- ✓ It is Serverless
- ✓ Only pay for what you have use
- ✓ Low-code and no-code Solutions

What are Key Components of ADF?

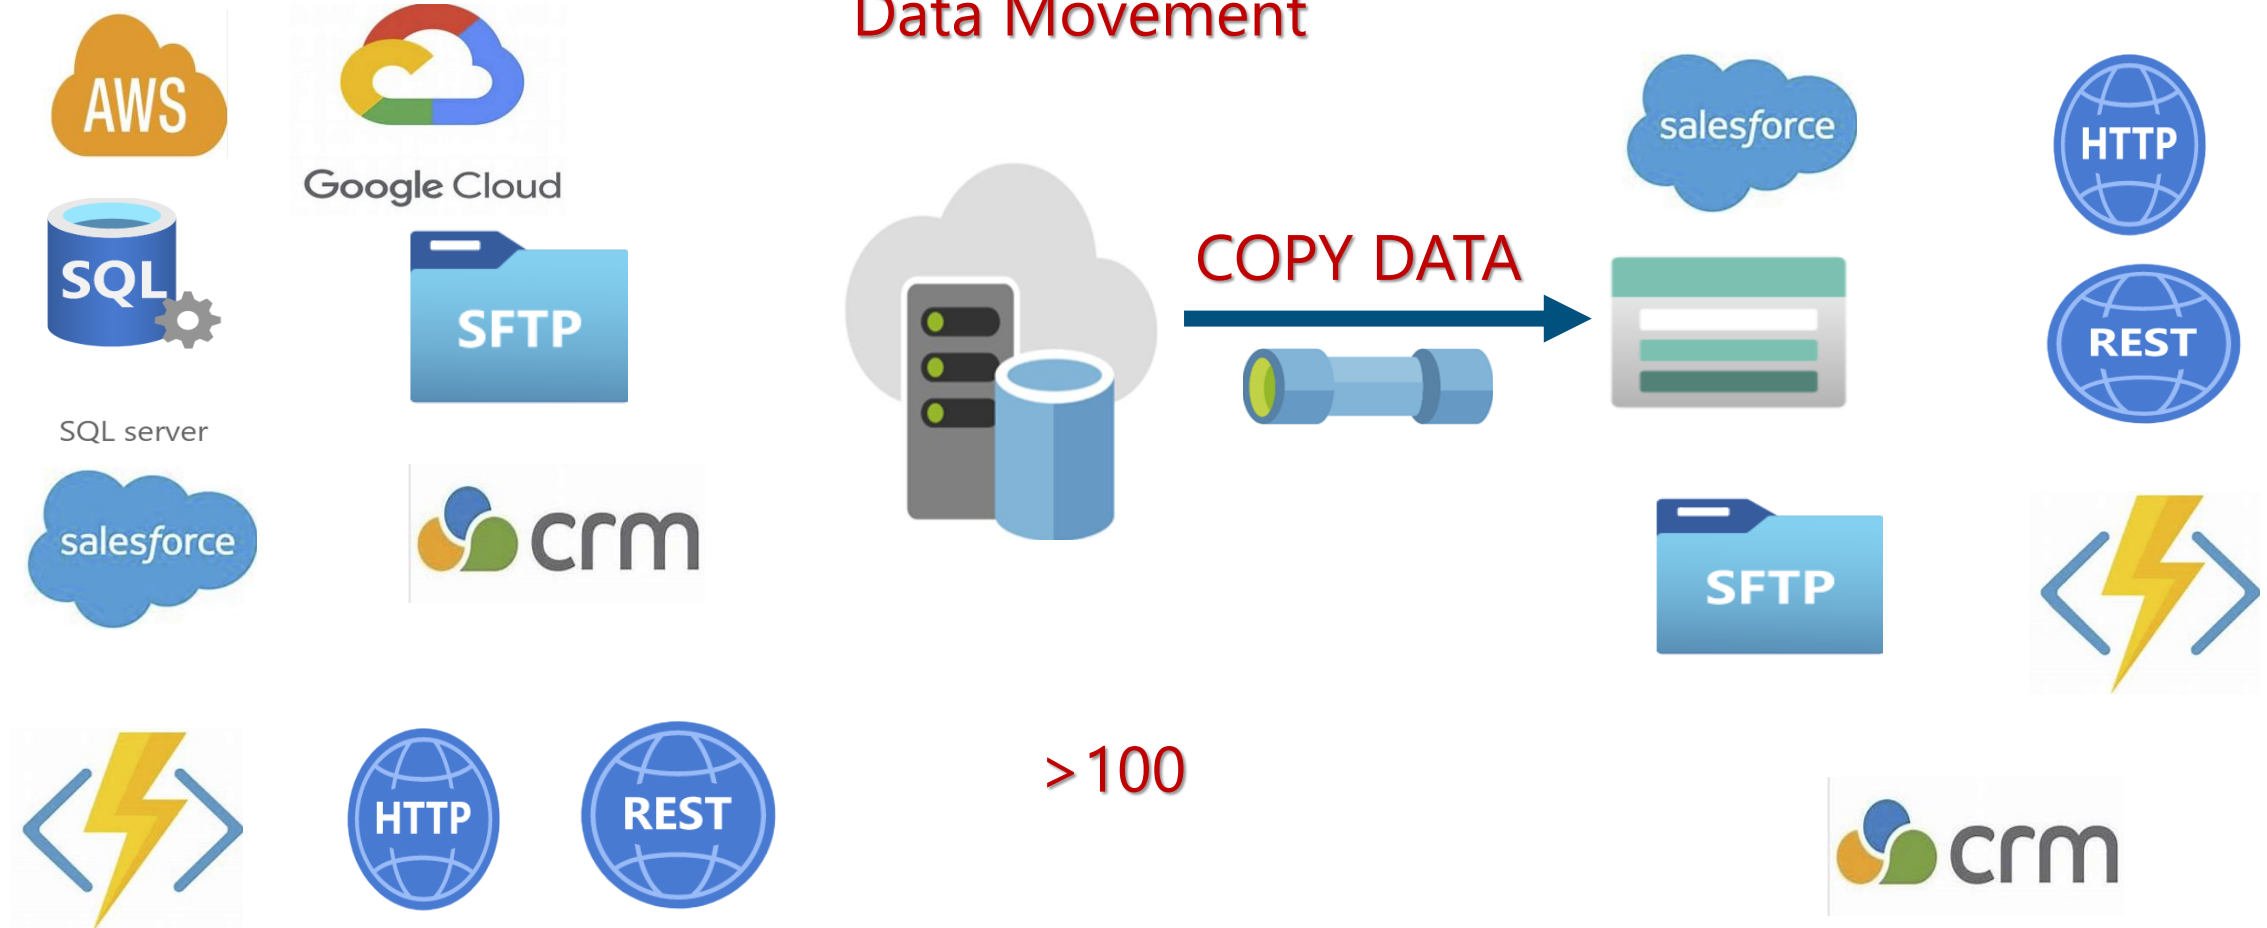

- 1 Linked services
- 2 Datasets
- 3 Activities
- 4 Pipelines
- 5 Triggers

What can you do in ADF?

Data Movement

[Copy activity - Azure Data Factory & Azure Synapse | Microsoft Docs](#)

What can you do in ADF?

[Source transformation in mapping data flow - Azure Data Factory & Azure Synapse | Microsoft Docs](#)

What can you do in ADF?

- Pipelines are JSON, ready for Source Control
- Git Integration built in
- Monitor
- Manage

{ JSON }

 Azure DevOps Git

 GitHub

What can you do in ADF?

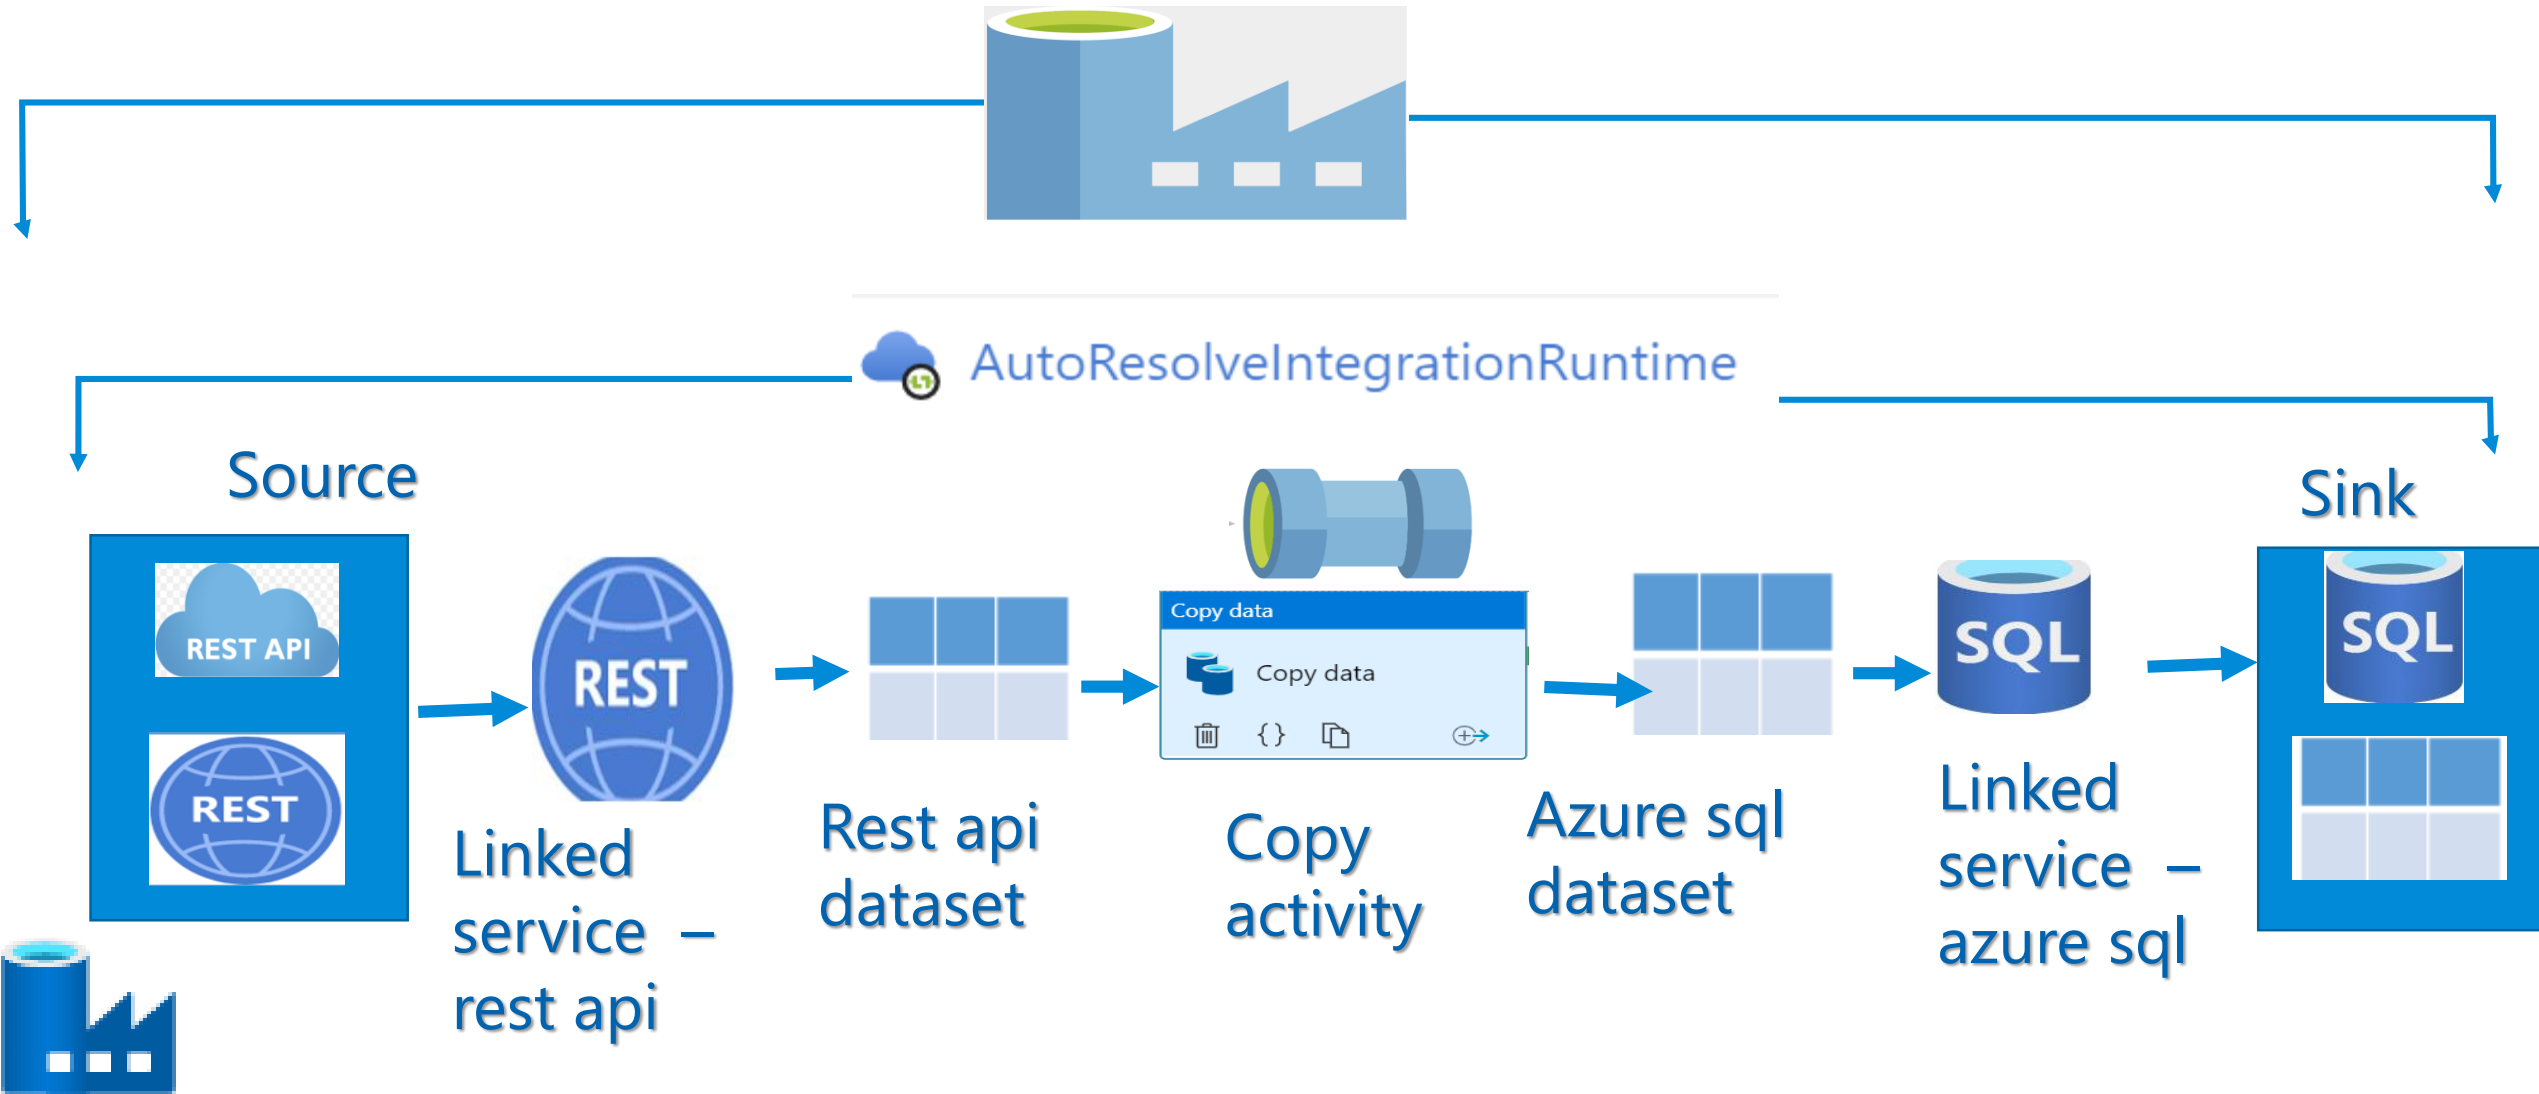

- Trigger pipeline
 - A Specific Time
 - File created or deleted from Blob Storage
 - Customer Activity such as

How Data Factory Works?

Let's Imagine we have scenarios to move Data from REST API to Azure SQL SERVER

DEMO

Lets have a Quick ADF Tour!!!

GlobalAzureBootcampSingapore2022-AzureDataFactory/Azure Data Factory.docx at main · alpaBuddhabhatti/GlobalAzureBootcampSingapore2022-AzureDataFactory (github.com)

DEMO

A Case Study - Data Movement & Data Transformation

Azure Resources

Scenarios :

Moving data from Azure Blob storage to Azure Data Lake Gen2.

Apply Transforming on data using Azure data flow and store to Azure SQL Server.

Following Azure resources needed per environment

1. Azure Resource group
2. Azure Data factory
3. Azure Data Lake
4. Azure Blob Storage
5. Azure SQL Server
6. Azure Key Vault

Data Movement - Pipeline 1

Azure Blob Storage

Data Movement

Azure Data Lake Gen2 /Blob Storage

Container → movie-in

Container → movie-staging

Data Transformation

Data Transformation – Pipeline 2

Azure Data Lake Gen2

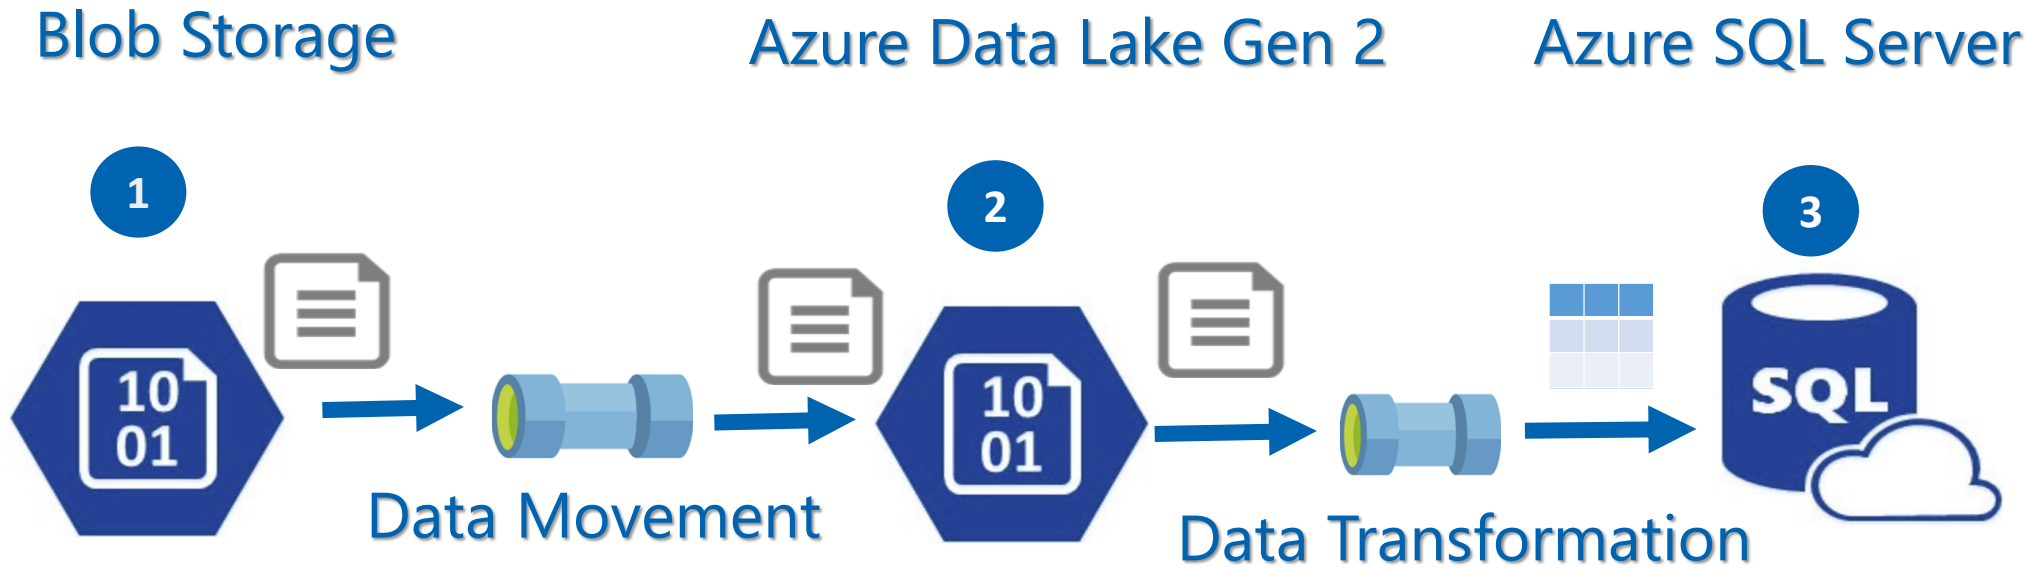

Azure SQL Server

Container → movie-staging Mapping Data Flow Table → dbo.MovieDB

Extract, Load and Transform (ELT)

Conclusion

Quick Overview of Azure Data

1. Data Movements
2. Data Transformation
3. Orchestration
4. Automation
5. Easy to Build Data Integration solution
6. Modern Data Warehouse (ELT or ETL)
7. Serverless and Azure PaaS

Key Component of Azure Data Factory

1. Linked Services
2. Datasets
3. Pipelines
4. Activities
5. Triggers
6. Integration Runtimes

ELT or ETL

1. Move data from
Blob storage → Data Lake Gen 2
2. Data transformation
Azure Data Lake Gen 2 → Azure SQL

Thank you!!!
